

Glue basic frame together pinned upside-down over plan. Trim trailing edge to shape on dotted line.

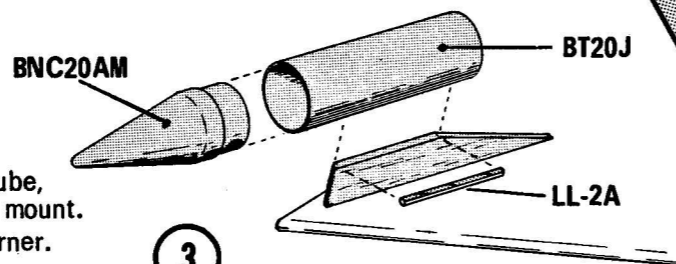

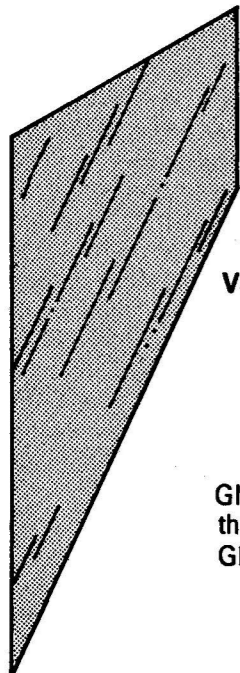

1
BUILDING BOARD

Cut out fuselage. Unpin and flip over the wing, glue the fuselage in place. Add doubler strips. Round the leading edges. Tissue model top and bottom. Apply 3 coats of clear dope.

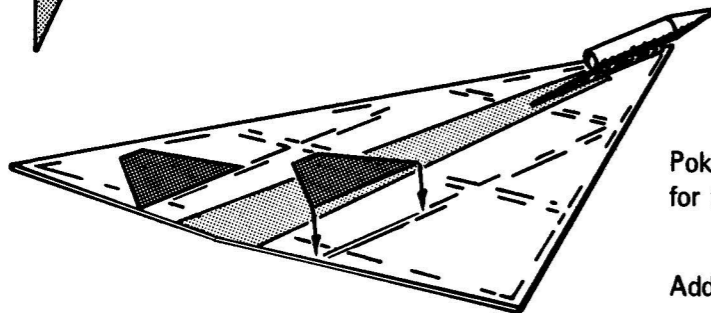

2

VERTICAL TAIL: 2 REQUIRED
1/16 SHEET Balsa

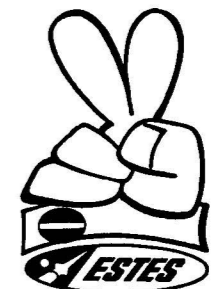

3

Glue the nose cone into the body tube, then glue this assembly to the pod mount. Glue the launch lug in the joint corner.

4

Poke pin holes through the tissue over the trailing edge and ribs for the vertical tail joints. Glue the vertical tails on. MAKE SURE THEY ARE STRAIGHT! Add the foil protector strip and decorate the model.
